

# CABLE TIE EXPRESS

A  Pegasus Company  
SUPPLY GROUP

*Your ultimate source for a full line of conventional and specialty cable ties, mounting products and heat shrink tubing.*

## product portfolio

# CABLE TIE EXPRESS

A **Pegasus** Company  
SUPPLY GROUP

## comprehensive cable management solutions

**Cable Tie Express** offers a broad selection of conventional and specialty cable ties ranging from 4 to 60 inches, including options with plastic or metal pawls (locking mechanisms that secure the tie), heavy-duty and reusable ties, UV-resistant ties, stainless steel, hook and loop, plenum rated ties (suitable for use in air handling spaces), and metal detectable ties (ideal for food processing environments requiring traceability). The product line also features mounting accessories, heat shrink tubing, and wire management solutions—ensuring that every cable management challenge has an effective answer.

## industry leadership and commitment

With more than 30 years of industry experience, **Cable Tie Express** distinguishes itself by offering products meeting UL 62275 (Electrical) and UL181B-C (HVAC) including REACH, RoHS, and AH-2 Air Handling certifications. The company's 30,000 square foot warehouse in Noblesville, Indiana, supports electrical, industrial, HVAC, MRO, packaging, advertising, and OEM distributors with a vast, ready-to-ship inventory for same or next-day fulfillment.

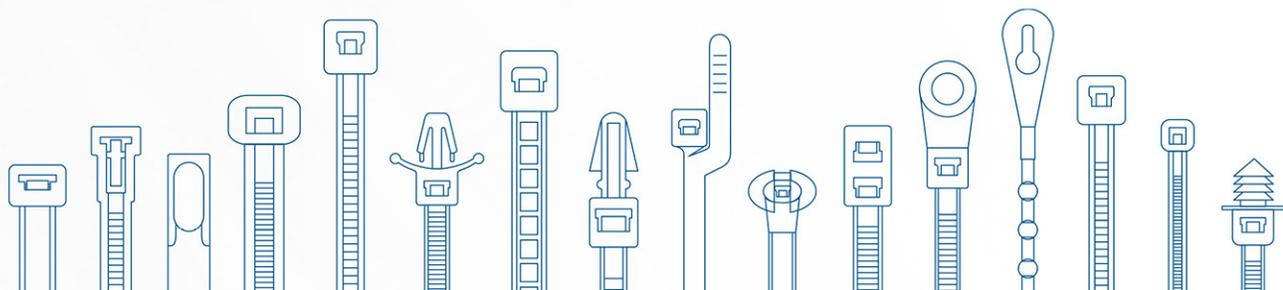

## outstanding customer service and custom solutions

**Cable Tie Express** is committed to delivering not only top-quality products and fast shipments but also custom solutions designed to meet unique project demands. Their expert team ensures every order is fulfilled with exceptional care and attention

## wholesale inquiries

Contact **Cable Tie Express** today to discuss your bulk order needs and discover how our expert team can deliver tailored solutions with unmatched speed and reliability at [sales@cabletieexpress.com](mailto:sales@cabletieexpress.com) or **888-603-1233**.

A  Pegasus Company  
SUPPLY GROUP

**Cable Tie Express** is a prime source for a wide range of conventional and specialty cable ties, mounting products, heat shrink tubing, and wire connectors, serving distributors and carrying one of the largest stocks of inventory in the United States.

- 57 Cable Tie Performance & Safe Handling
- 58 Ordering & Return Policy

# materials specifications

## General Purpose Polyamide 6.6

General Purpose nylon 6/6 features light weight, high strength and a wide temperature range. Even at higher than recommended temperatures or exposure to flame, nylon does not give off toxic or irritating by-products. Nylon 6/6 is hygroscopic and therefore absorbs or releases moisture depending on its environment. Moisture levels of the material will affect tensile strength, stiffness, and elongation of the product.

## UV Stabilized Polyamide 6.6

General purpose nylon 6/6 with increased resistance to ultraviolet light. Carbon black is one of the most effective stabilizers known today. A uniform dispersion of carbon black provides good ultraviolet light resistance without adversely affecting physical properties. The addition of carbon black or any other ultraviolet stabilizer prolongs the useful life of plastic products used outdoors, but it does not totally eliminate the destructive effects of the light.

## Heat Stabilized Polyamide 6.6

Polyamide 6.6 Heat Stabilized material has chemical stabilizers which offer additional benefits for use during higher continuous operating temperature applications.

## Cold Weather Polyamide 6.6

- » Impact modified performance
- » Excellent in extreme cold

## Metal Detectable Cable Ties

- » Used in areas around food and pharmaceutical industries where contamination may be an issue
- » Manufactured in blue for easy identification and impregnated with metal flakes for pick-up with magnets or X-Ray identification
- » Available in a variety of lengths and tensile strengths

MATERIAL	OPERATING TEMPERATURE	COLOR	WEATHERING LIFE EXPECTANCY	FLAMMABILITY RATING	MATERIAL PROPERTIES
Polyamide 6.6 (Nylon 6/6) General Purpose	-40°F to 185°F	Natural, Black & Colors	1 to 3 years	UL94-V2	High Yield Strength
Polyamide 6.6 (Nylon 6/6) UV Stabilized	-40°F to 185°F	Black	5 to 9 years	UL94-V2	UV Resistant High Yield Strength
Polyamide 6.6 (Nylon 6/6) Heat Stabilized	-40°F to 221°F	Black	5 to 9 years	UL94-V2	UV Resistant High Yield Strength Elevated Max Temp
Polyamide 6.6 (Nylon 6/6) Cold Weather	-40°F to 185°F	Black	5 to 9 years	UL94-HB	Remains Flexible at Low Temps and for Use in Cold Areas, UV Stabilized
Polyamide 6.6 (Nylon 6/6) Metal Detectable	-40°F to 185°F	Blue	1 to 3 years	UL94-HB	FDA Approved metal flake impregnated material for contamination detection in food and pharmaceutical production areas

\* Contact Customer Service for full product specifications

Cold Weather Ties are designed to function in extreme environmental conditions. The Cold Weather Nylon 6/6 resin blend is specifically designed to solve cold temperature (-40°F) and low humidity application issues. Other features of the Cold Weather Tie is its extended UV protection and enhanced flexibility.

**RATED FOR INSTALLATIONS DOWN TO -40° F**

Manufactured by co-extrusion of polyolefin and meltable adhesive, it is designed to provide insulation and create a tight seal for protected articles. Typical applications are environmental sealing of electrical components such as wire splices and harnesses in the automotive and communication industries.

# moisture content cable ties

**Cable tie performance** is directly related to the **moisture content** of the ties.

Nylon 6/6 is the material of choice for cable ties for many reasons. With a very high strength to weight ratio, this material is noted for its toughness, impact strength, resistance to abrasion and chemicals, wide temperature range, and versatility in a variety of applications. Nylon 6/6 is a UV Blackly hygroscopic material – it absorbs and releases moisture depending on its environment.

When first produced, cable ties contain nearly zero per cent moisture. At this point, the ties are at their greatest tensile strength but may also be brittle and lack toughness. If exposed to air for an extended period of time, the tie will UV Blackly absorb water. However, this can take several weeks. Where the average relative humidity is about 60%, a normal condition in the United States, the tie will reach about 3% moisture. Figure A of the graph below indicates how relative humidity affects the amount of moisture.

Manufacturers of cable ties, however, want the ties to reach an optimal condition quickly so a measured quantity of water (2-3% by weight) is added during the packaging process. Following the addition of this moisture, it takes about three weeks for the desired level of absorption to take place for optimal performance. Resulting from this procedure is a fine balance between tensile strength and toughness. Figure B of the graph below highlights how the tensile strength decreases with increased moisture and further emphasizes the value of a 2-3% moisture content for cable ties (in this case, this relationship is illustrated for a standard 50 lb tie).

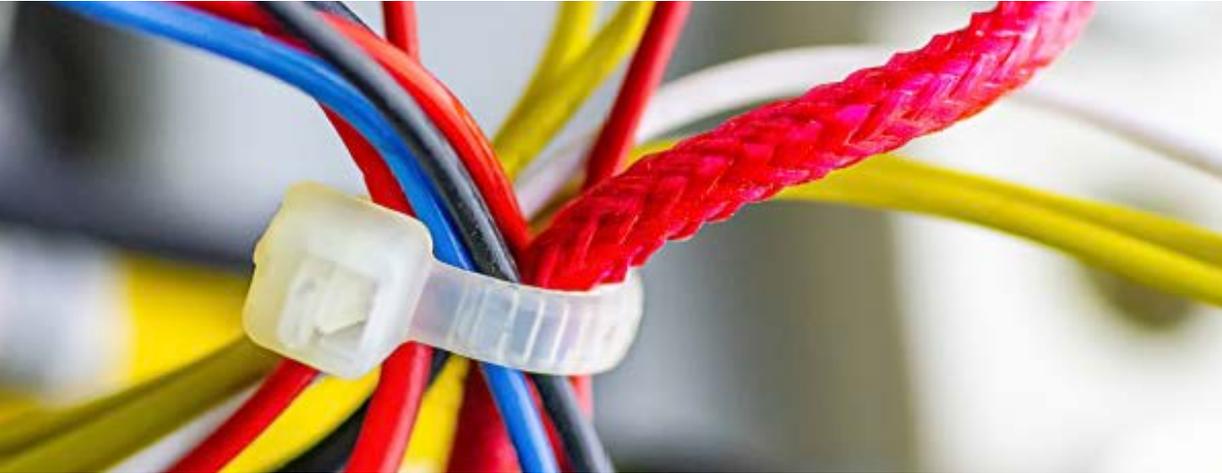

When examining concerns regarding the performance of cable ties, it is clearly evident that moisture is often the issue. Following the recommendations below will minimize this issue and maximize performance.

- » Bags of ties should be used in a timely manner or remain sealed until required for application.
- » Bags left open result in ties drying out, becoming brittle, and perhaps breaking.
- » Proper quantity per bag should be purchased – bulk bags are ideal for higher volume usage while smaller bags are recommended for low volume requirements.
- » A first in first out inventory policy, as we do at Cable Tie Express, is recommended.
- » Special attention regarding usage and storage environments is recommended during times of the year when extreme temperatures exist.

We hope this information is helpful in your understanding of cable ties and their performance. We provide this to you in keeping with our Mission Statement - to be the most responsive, dependable, and knowledgeable provider of superior quality cable ties and associated products.

» Call our **experienced sales team** at **1-888-603-1233** to place your order

Cable ties are most frequently manufactured of Nylon 6/6, the material of choice for many reasons. With a very high strength to weight ratio, this material is noted for its toughness, impact strength, resistance to abrasion and chemicals, wide temperature range, and versatility in a variety of applications.

Nylon 6/6 is a UV Black hygroscopic material - it absorbs and releases moisture depending on its environment. It is important to understand that cable tie performance is directly related to the moisture content of cable ties. Manufacturers of cable ties produce ties with a water content of approximately 2.5% - 3% which enables proper performance levels to be achieved. These products are sealed in packaging to ensure that the water content in the material remains constant.

## Storage+handling conditions

- » Ideal storage conditions are 70°F and 50% relative humidity. Cable ties should not be stored in an unheated warehouse. Shelf life can be reduced by temperature and humidity extremes.
- » Cable ties should remain packaged in the manufacturer's original sealed bags until ready for use. Any break or hole in the bag can lead to dryness and resulting brittleness of ties. Keeping bags sealed until use should also be followed in bin stocking applications with bags opened and bins filled only after bin is empty of ties.
- » A First In First Out inventory method is recommended.
- » Partial cable tie bags should be closed or sealed if at all possible.

## Cable tie purchase

- » Cable ties should be purchased with proper length, strength, and bundle diameter to meet requirements of the application.
- » Bags should be purchased in quantities (bulk or smaller packages) to meet application requirements. Bulk bags are ideal for higher volume usage while smaller bags are recommended for lower volume applications.
- » Cable ties should be purchased as needed to meet application requirements. It is recommended that no more than 1-3 months usage be purchased at a time. Blanket order purchasing with flexibility in release dates is recommended, allowing adjustment to demand fluctuations, ensuring fresh product, and enabling Cable Tie Express to secure inventory in a timely fashion.

## Cable tie usage

- » Careful evaluation of the application requirements should be made to ensure that ties with the proper length, strength, and bundle diameter are obtained.
- » Cable ties should not be over tensioned when installing. Over tensioning weakens the tie.
